Accurate reading in minutes
Portable, safe, easy to use
No power supply or calibration required
Low cost analysis for your gas detection needs

KITAGAWA HISTORY IS A HISTORY OF DETECTOR

KITAGAWA GAS DETECTOR TUBE SYSTEM started with a H₂S tube for quality control in year 1947 and has led a path in a field of gas analysis.

KITAGAWA GAS DETECTOR TUBE SYSTEM COMPRISES OF 「DETECTOR TUBES」 AND

「SAMPLING PUMP」

GAS DETECTOR TUBES

change colours when chemical reagents filled in a glass tube react with sampled target gas through the tube. The stain created is proportional in length to the concentration of the target gas, so the concentration is read directly off the printed scale on the tube. Kitagawa offers about 250 kinds of tubes to measure about 400 different kinds of tubes and ranges.

AP-20 SERIES

A SHATTERPROOF DETECTOR TUBE

has 2-layer of films to protect from a breakage. Even if broken, the inside reagents do not scatter. (patent no.4100883)

ANTIBACTERIAL NONSKID GRIP
offers a hand fit easily and is light to pull.

SAMPLE FINISH INDICATOR

is easy to check the sampling completes.

- Designed and manufactured at certified factory by ISO9001(Quality management system) and ISO14001(Environmental Management System)
- Japan design registration No.1131898
- United States Design Patent No.US D467, 334 S

KITAGAWA GAS DETECTOR TUBES ARE USED ALL OVER THE WORLD.

TUBES

SAMPLING PUMP

A portable sampling pump to suction a constant amount of target gas into the detector tubes. Safe, light and easy to use. No power supply is required. Accurate toxic gas measurement in minutes. A sampling pump with a counter unit is useful where multiple pump strokes are applicable.

LED COUNTER UNIT

N.B.) The counter unit cannot be used in the hazardous locations.

MODEL AP-20CT

INTEGRAL CERAMIC TUBE TIP CUTTER

cuts the ends of detector tubes easily.

Take out the tip cutter to dispose glass tips.

TIP CUTTER UNIT

The counter unit is pre-assembled and replaceable with the tip cutter unit provided.

SPECIFICATION

● The AP-20 Series Pump is available in four different colours.

HOW TO USE GAS DETECTOR TUBES

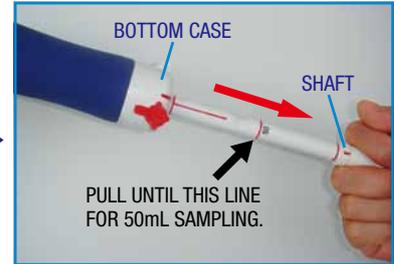

Read the instruction manual for each detector tubes and sampling pump before use.
 Check our website for the usage at www.komyokk.co.jp/en/.
 Use the detector tube by the expiration date printed on top of the tube box.

① Scroll both ends of tube with a tip cutter to open the tube.

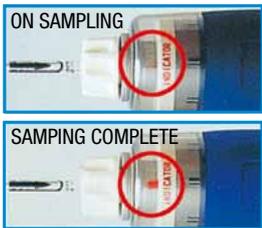

② Insert the tube into the inlet of the pump with an arrow mark pointing to the pump.

③ Align the red lines on the shaft and the bottom case and pull the handle until full to lock.

Wait until sampling completes
 ※ Sampling time varies on tubes.
 Read the instruction manual for each tubes for the sampling time.

④ Take the sample.
 (Wait for 5 seconds after the indicator pops up.)

● For more than 200mL sampling, return the handle and repeat procedure ③ and ④.

⑤ Take out the tube and read out the end point of discolouration layer to know the concentration.

When the end point is between the scales, prorate to read out.

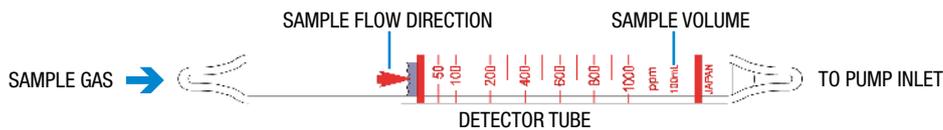

Discoloured stain	Slanted stain:	read the gas concentration at the middle of A and B
Discoloured stain	Wavy stain:	read the gas concentration at the middle of A and B
Discoloured stain	Faint discolouration:	read the gas concentration at the discernable end A of the stain

『Temperature correction for tubes』 enables temperature correction easily.

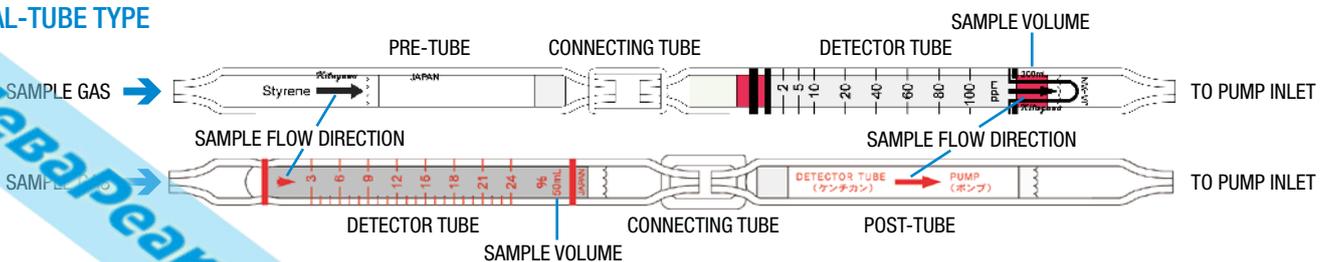

- Enter Tube no.
- Select sampling volume where applicable
- Enter temperature
- Hit correct to confirm the corrected value

GAS DETECTOR TUBE DESCRIPTION

DUAL-TUBE TYPE

※The connecting tube is packed in the tube box of a dual-tube type.

НеваРеактив

Useful options for Kitagawa gas detector tube system

Rubber Extension Hose SH-5N/SH-10N
SH-20N/SH-20C

For remote sampling to draw samples from hazardous or confined spaces such as tanks, manholes, ship holds, etc.

Length : 5m(SH-5N)
10m(SH-10N)
20m(SH-20N/SH-20C)
SH-20C is for a dual-tube type.

Extension Sampling Rod SR-200R

To enable gas detection vertically and horizontally at hazardous areas or confined spaces where workers cannot enter or unreachable places.

Maximum length : Approx.2.2m

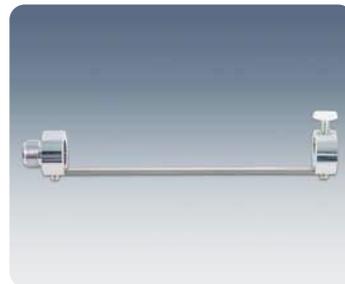

Hot Air Probe SF-40

For sampling high temperature gas such as emission gas from gas fittings or automobiles.

Length : 40cm
Operating temp. : Below 600°C

Hot Air Probe Holder SFH-01

To provide a stable connection of sampling pump and hot air probe.

Remove the connector holder of the sampling pump and connect the hot air probe holder and the sampling pump. Break both ends of the detector tube and connect to the hot air probe. Open the screw knob and insert the detector tube into the hot air probe holder. Insert the detector tube into the rubber tube connector of the sampling pump, then close the screw knob.

Glass Syringe SS-100/SS-200

For sampling high temperature gas, momentary concentration or diluting high concentration gas.

Volume : 100mL(SS-100)
1200mL(SS-200)

Sampling Probe for gases in Soil SPG-1/SPG-1N

For simple check of chlorinated organic solvents contamination in soil.

Length : 1m

SPG-1N is for a dual-tube type.

A boring bar is required to dig a hole into the soil.

Tip Cutter B-191

To break the ends of detector tubes and prevent scattering of glass fragments. Transparent container easily lets you know the amount of fragments.

Air Flow Control Orifice with O-ring 20K

Some detector tubes require air flow control orifice to use.

HOW TO READ LIST OF KITAGAWA PRECISION GAS DETECTOR TUBES

Gas to be measured

The concentration of the target gas is read directly off the printed scale or by using a concentration chart packed in a tube box.

Tube No.

Tube numbers are listed in descending order of high concentration.
 © after tube no. means the concentration is read by using a conversion chart.

Measuring range & No. of Pump Strokes

In case where multiple measuring ranges apply, ○ mark indicates the scale printed on the tube.
 Example: Tube No.126SF Measuring range(ppm) No. of Pump Strokes
 200~4,000 1/2
 (100~2,000) ①

Shelf life(year)

The shelf life starts from the date manufacturing started.

Q'ty of tubes/box

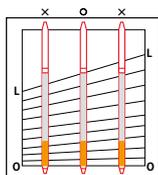

Most tubes come in a box of 10 tubes to make 10 times measurement per box.
 2 x 5 or 3 x 5 tubes come in a box of 5 detector tubes and 5/10 pre or post tubes to makes 5 times measurement per box.

Threshold limit value

TLV(J):Occupational Exposure Limits(OELs) recommended in Journal of Occupational Health issued by The Japan Society for Occupational Health (2020-2021).
 ():provisional value *:Maximum Allowable Concentration
 TLV(A):TLV-TWA. Threshold Limit Values for Chemical Substances in the Work Environment adopted by ACGIH(American Conference of Governmental Industrial Hygienists).
 ():intended changes for 2021 C:TLV-C(ceiling value)
 STEL:TLV-STEL(short-term exposure limit(15 minutes reference period))
 TLV(B):Workplace Exposure Limits(WELs) listed on guidance Note EH40/2005(fourth edition 2020) from HSE(Health and Safety Executive) in U.K.

Concentration chart type

Align the zero end of the detecting reagent with O-O line on the chart and the other end of the layer with the L-L line. Read the gas concentration at the maximum end of the stain against the scale on the chart.

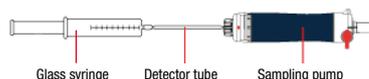

Colour chart type

Measure the gas concentration by comparing to the colour standard.

Measuring high concentration gas exceeding the measuring range of detector tubes

Collect a volume of sample gas into a glass syringe and dilute with fresh air. The tube reading is then multiplied by the ratio of dilution to determine the actual concentration.

Measuring in an atmosphere under pressure or reduced pressure

If 100mL of gas is collected at a pressure that is two times atmospheric pressure, it is equivalent to 200mL of gas collected at normal atmospheric pressure. When measuring at pressures other than normal atmospheric pressure, a pressure correction is required. Therefore it is recommended to collect the sample in a gas sampling bag, then measure it at normal atmospheric pressure for more accurate readings.

SUBSTANCES TO BE MEASURED BY USING CONVERSION CHARTS

Conversion charts are available, upon request, for the following listed chemical substances using existing detector tubes within the Kitagawa range. These conversion charts are for use in a temperature of 20°C/68°F.

Other conditions, such as different temperatures, humidity and coexisting gases, are not confirmed.

Please specify the name of the substance to be measured together with the tube number when ordering.

Specifications

- ① Tube/box : 10 tubes (5-time use)
- ② Pump stroke : 1 (100mL) +1 (100mL)*
- ③ Sampling time : 30+30 seconds*
- ④ Shelf life : 2 years

* The "A" side sampling and the "D" side sampling are required by using two fresh tubes for one-time analysis.

If Tube No. 186B shows no stains, test for these substances:
 Acetic Acid (216S)
 Carbon Tetrachloride (147S)
 Methyl Bromide (157SB)
 Pyridine(105SD)
 Methane and Ethane

NOTE

means both stain colours are considered equivalent

■ Rubber bulb is required. □ Rubber bulb and filter paper are required.

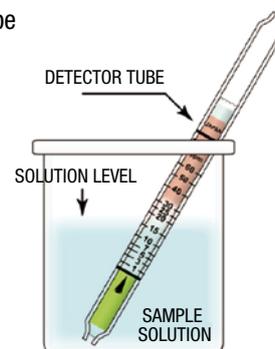

● Suction method

Insert the end of detector tube into the rubber bulb to draw sample solution up.

● Immersion method

Immerse the end of detector tube in a sample solution and use capillary action to soak the sample up.

Tip Cutter

Included in a tube box for dissolved substances in solution, high sensitivity and collection tubes to cut the ends of the detector tubes.

‡ This tube must be stored in a refrigerated place (0-10°C/32-50°F).
Air Sampler is required for above tubes.

To check suction power, air flow direction and speed of an air flow from draft, duct, ventilation fans and hoods by generating white smoke.

Air Flow Indicator Tube 301

Used with air flow indicators AS-1, AS-2 or AS-3. Air flow indicator tube has a film coating to avoid scattering of reagents inside for safe check. Complies with OSHA(Occupational Safety and Health Administration, UNITED STATES DEPARTMENT OF LABOR)'S protocol for respirator fit testing(29CFR 1910 134 App A).

<CAUTION FOR USE>

Air flow indicator tube fills smoke generators in a glass tube. They react with vapour in the air and generate white smoke. The white smoke generated includes toxic hydrogen chloride.

Pay attention to the following:

- Do not breathe or touch the white smoke. The white smoke may irritate eyes, nose and throat. If breathed, immediately gargle. When smoke touches the skin, wash it off with water.
- The smoke corrodes metals or causes malfunction. Do not use near precision instruments.
- Do not use in confined spaces, crowded places or residential areas.
- Do not use in hospitals, food handling places or clean rooms.

<Tube no.301> includes;

- Air flow indicator tube×10
- Tip cutter
- Cap×4

Air Flow Indicators AS-1/AS-2 (for continuous monitoring)

<AS-1> includes;

- Rubber bulb
- Carrying case

<AS-2> includes;

- Rubber bulb and air reservoir
- Carrying case

* Air flow indicator tubes are sold separately.

AS-1 and AS-2 do not carry any heat sources so are an ideal for visual examine in explosion-risk areas.

AS-1 : Insert the air flow indicator tube into the rubber bulb and squeeze the bulb to generate the white smoke. One tube makes about 100 times smoke.

AS-2 : Insert the air flow indicator tube into the inlet of the rubber bulb and squeeze the bulb to generate the white smoke continuously by putting through an air-buffer in the air reservoir. The white smoke continues for about one minute.

Air Flow Indicator AS-3 (for remote monitoring)

For continuous or intermittent air flow check where ventilation fan or hood is unreachable or located at confined spaces up to 2 metres.

SPECIFICATION

Pump	Diaphragm
Power supply	4×AA size alkaline dry battery
Run time	Approx. 4 hours (alkaline dry batteries, with air flow indicator tube)
Size	51(W)×67(H)×84(D)mm(pump part), length 2m
Weight	300g (including dry batteries)

* Air flow indicator tubes are sold separately.

△ Non-explosion proof. Do not use in explosion-risk areas.

Smoke Generator SG-1

- Compact, light and simple operation
- USP food grade smoke reagents (propylene glycol and glycerin)
- Capable of generating smoke in all directions
- Replaceable cartridge

SPECIFICATION

Power supply	4×AA size alkaline dry battery
Run time	About 1,000 times one-second-smoke at MANUAL mode About 30 times thirty-second-smoke at AUTO mode
Size	35(W)×185(H)×35(D) mm
Weight	110 g (excluding batteries)
Accessory	SGC-1 cartridge ×1, Alkaline battery×4
Option	Leather case

△ Non-explosion proof. Do not use in explosion-risk areas.

△ Do not use in clean rooms.

We develop and offer various rapid and easy detection kits using gas detector tubes applying our built-in technique for variety of industries, where means for analyzing are used to require expertise and significant time and money.

Flue Gas Sampler P-10FG

Measures gas samples from a gas duct such as Nitrogen oxides, Sulphur dioxide, Oxygen to prevent pollution easily and quickly. For voluntary control of emission standard.

<P-10FG> includes;

- AP-20B sampling pump
- Stainless steel sampling probe (Length 980mm when 3 probes connected)
- Thermometer (0~300°C)
- Ribbon heater(AC220V, 50W)
- Suction pump
- Rubber connection tube (1.5m)
- Carrying case

* Gas Detector tubes are sold separately.

Simple Measurement Set for Chlorocarbons in Drainage P-20/P-24AP

Offers easy detection of solvents in drainage by measuring the head space gas with detector tubes where contaminating public water or groundwater caused by chlorine-based organic solvents from dry cleaning or cleansing of semiconductor component bring a problem.

<P-20> includes;

- Resinous gas collector (100mL)
- B-190 Tip cutter
- Collecting bottle (500mL)
- Thermometer

◎ AP-20 sampling pump is required for 50mL sampling.

* Gas Detector tubes are sold separately.

<P-24AP> includes;

- AP-20B sampling pump
- Grease
- Rubber tube connector×2
- Hand strap
- Collecting bottle (500mL)×5
- Thermometer
- Carrying case

* Gas Detector tubes are sold separately.

Compressed Breathing Air Sampling Kit P-41R

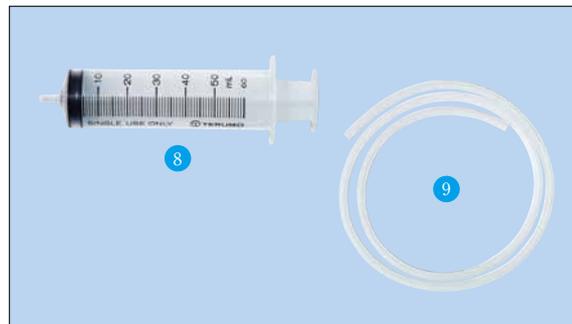

Impurities in breathing air for respiration can adversely affect human health. The kit is designed to measure these contaminants in SCBA, SCUBA and other pressurized breathing air cylinders, as well as directly from the outlet of an air compressor or purifier. The kit easily measures five components within minutes : carbon monoxide, carbon dioxide, oil mist, water vapor and oxygen by aerating the detector tube with an exclusive reducing valve from the breathing air source.

<P-41R> includes;

- ① Control assembly
(Including an adapter with W22-14RH Female thread for rescue and on-land cylinders)
 - ② International fitting yoke (For a scuba cylinder)
 - ③ Tube protector
 - ④ Tip cutter for gas detector tubes
 - ⑤ Wrench
 - ⑥ Digital stopwatch
 - ⑦ Carrying case (Aluminum)
- * Gas detector tubes are sold separately.

Optional Accessories for 604SP only;

- ⑧ 50mL plastic syringe
- ⑨ 1m vinyl tube

Harmful Gas Detector for Disaster Relief P-50/UFO-IIH

In various disasters blown up, rescue teams often suffer from secondary disasters. Among them, disasters caused by invisible toxic gases make relief efforts dangerous.

The kits offer fast and easy detection of toxic gases at rescue site.

<UFO-IIH> includes;

- P-50 x 1
- Following detector tubes

Air Sampling Pump ASP-1200

Designed to be used with detector tubes, DNPH tubes and charcoal tubes.

- High suction power
- 10 measuring patterns can be registered
- Enhances dust proof and water proof capabilities (equivalent to "IP43")

SPECIFICATION

Flow range	10-1200mL/min (constant flow function)
Flow volume accuracy	10-100mL/min : ±5mL/min 100-1200mL/min : ±5% against indication value
Accumulated flow volume indication range	0.0-9999.9L
Accumulated sampling time indication range	00:00-999:59 (hour:minute)
Timer	Set start-time and end-time
Operating temperature & humidity	0-40°C ; 0-90%RH (non-condensing)
Power supply	4×AA size battery (alkaline, nickel metal-hydrate, or lithium) AC power (input AC100-240V 50/60Hz, output DC5V Max 1.8A, USB Micro-B terminal(male))
Size & weight	145(W)×99(H)×54(D)mm 490g (including batteries)
Options	Impinger holder, impinger hook, replacement filter (10pcs)

Air Sampling Pump High Flow ASP-6000

Designed to be used with gas detector tubes and sorbent tubes and to collect dust with a holder for collection and liquid with a impinger.

- Wide flow range from 0.10 ~ 6.00L/min
- High suction pressure
- Saves up to 10 sampling conditions

SPECIFICATION

Flow range	0.10 ~ 6.00L/min
Flow volume accuracy	0.00 ~ 1.00L/min : ±0.05L/min, 1.00 ~ 6.00L/min : ±5 of indicated value at calibration with designated flow volume 1.00 ~ 6.00L/min : ±3%RD of flow volume 1 point

Operating temperature & humidity	0-40°C ; 10-85%RH (non-condensing)
Power supply	Rechargeable Lithium-ion battery or AC adaptor (USB TYPE-C)
Size & weight	160(W)×110(H)×85(D)mm(excluding protruding) 900g
Options	Impinger holder, impinger hook, holder hook to collect particles, replacement filters x 10

Air Sampling Pump TWP-1

Designed to be used with gas detector tubes and charcoal tubes.

- Independent 2 suction ports
- To sample 2 detector tubes or charcoal tubes at one time
- Saves up to 10 sampling conditions for each suction ports

SPECIFICATION

Flow range	10-1200mL/min (constant flow function)
Flow volume accuracy	10-100mL/min : ±5mL/min 100-1200mL/min : ±5% against indication value
Accumulated flow volume indication range	0.0-9999.9L (at 20°C or 25°C conversion)

Options	Impinger holder, impinger hook, replacement filter (10pcs)

Air Sampling Pump DSP-550

Collects samples into a sampling bag directly for air sampling in work environment.

- Almost zero VOC adsorption inside the air sampling pump
- Small, excellent quietness and no vibration
- * Tripod and sampling bag are sold separately.

SPECIFICATION

Flow volume setting range	50-550mL/min (constant flow function)
Flow volume accuracy	Either ± 10 mL/min or within $\pm 5\%$ against flow volume setting, whichever greater
Accumulated flow volume indication range	0.00-99.99L
Accumulated sampling time indication range	00:00-99:59 (hour:minute)
Timer	Set start-time and end-time
Operating temperature & humidity	0-40°C ; 0-90%RH (non-condensing)
Power supply	2×AA size battery(alkaline, nickel metal-hydride) or USB power DC5V(output 0.5A or more) Micro-USB B connector
Size & weight	68(W)×120(H)×31(D)mm 170g (including batteries)
Options	Replacement filter with tube (3pcs)

COLLECTION TUBES

Charcoal Tube 800B

To collect organic solvent vapour.

In conformity with NIOSH requirements.

- Scavenger : coconut shell charcoal
 Fill ration : 1st layer : 100mg
 2nd layer : 50mg
 ● 20 tubes/box, cap 40 pcs
 sticker 20 pcs, tip cutter

Charcoal Tube 800EC

To collect organic solvent vapour.

A scratch for easy cut of the tube.

- Scavenger : synthetic charcoal
 Fill ration: 1st layer : 100mg
 2nd layer : 50mg
 ● 10 tubes/box, cap 20 pcs
 sticker 10 pcs, tip cutter

Silica Gel Tube 801

To collect polar solvent vapour such as methanol, acetone.

- Scavenger : silica gel type A
 Fill ration : 1st layer : 300mg
 2nd layer : breakthrough indicator
 ● 10 tubes/box, cap 20 pcs
 sticker 10 pcs, tip cutter

DNPH-Treated Silica Gel Sorbent Cartridge 815H

To collect aldehydes and ketones.

- Scavenger : DNPH-treated silica gel
 Fill ration : 400mg
 ● 10 pcs/bag, sticker 10 pcs
 Shelf life : 1 year

APPLICATIONS OF KITAGAWA GAS DETECTOR TUBE SYSTEM

INDUSTRIAL HYGIENE

Measures harmful gases and vapours quickly in the atmosphere to control the concentration in the work place.

INDUSTRIAL WASTE WATER

Measures effluent simply and quickly to identify the source of pollution anywhere.

PROCESS CONTROL

Measures impurities in gases as raw feedstock and intermediates to ensure high product quality and prevent catalyst poisoning to improve production efficiency.

FIRE/EXPLOSION PREVENTION

Measures mixed combustible gases speedily and safely on-site without ignition source to prevent fire and explosion by leaked or generated gas.

ON BOARD

Measures toxic gas before entering cargo rooms or checks residual gas after cleaning chemical tanks in conformity with the IMO rule.

AIR POLLUTION CONTROL

Measures toxic gases such as SO₂ and NO₂ in flue gas rapidly on-site to identify and control the source of pollutant in the air.

COMBUSTION EFFICIENCY

Measures CO, CO₂ and O₂ in exhaust gas to check combustion efficiency of combustion appliances.

EDUCATION

Measures classroom environment or as an experimental tool for learning combustion and photosynthesis in a science class.

PREVENT ACUTE POISONING

Measures leaked, blowout, generated or residual toxic gases rapidly to prevent poisoning.

DRINK DRIVING CONTROL

Measures alcohol in the breath and contributes to preventing alcohol related accidents.
